

FOR IMMEDIATE RELEASE

**RECURSION' S C++ <TOOLKITS> CERTIFIED ON VXWORKS REAL-TIME
OPERATING SYSTEM**

*Expanded platform support and robust code increases developer
options in working with embedded systems.*

DALLAS, TX (April 28, 2003) - Recursion Software, Inc., a global provider of software development solutions, announced today the expanded support of C++ <ToolKits>™ 3.0 to include certification on the Wind River Systems, Inc. (NASDAQ: WIND) VxWorks® real-time operating system (RTOS), a major enhancement of its already extensive feature design. The latest C++ release is the most powerful and flexible library to date.

By supporting the Standards <ToolKit>, Foundations <ToolKit>, and Web <ToolKit> for the VxWorks RTOS, we enable our customers to utilize our classes on real-time, embedded systems, leveraging the portability of the C++ <ToolKits> into the embedded market. Already running on numerous UNIX platforms as well as Microsoft .NET, extending our cross-platform support to Wind River' s VxWorks platform is the most recent unfolding of a natural progression.

“With our latest C++ release certified on VxWorks RTOS, we believe that we have once again demonstrated our commitment to increasing the breadth and scope of our software development tools,” said Paul A. Lipari,

President and CEO of Recursion. “Developers will find improved design and higher performance for multithreaded distributed applications in this version.”

The latest version of the C++ <ToolKits> will allow Wind River customers to develop embedded systems with greater efficiency and produce more robust code. The flexible design and reliable multithreading are defining characteristics of Recursion’s C++ <ToolKits>.

About Recursion Software, Inc.

Founded in 2001, Recursion Software, Inc. provides software engineers with powerful enterprise software development solutions for constructing distributed computing systems with proven Java-based methods. Recursion Software products allow Java, C++, and C# developers to be productive quickly by leveraging expertise in object-oriented techniques and incorporating industry standards. Recursion Software’s customer base includes Raytheon, EMC, Goldman Sachs, Hewlett Packard, Oracle, Countrywide, and Sprint, as well as hundreds of other well-respected organizations. Recursion Software is headquartered in Frisco, Texas.
