FOR IMMEDIATE RELEASE

C++ ToolKits Equipped With High Level Math Functionality

Math toolkits expand versatility of applications

DALLAS, TX (Oct. 13, 2003) – The C++ ToolKits from Recursion Software, Inc. now include a Math toolkits addition and 64-bit support. Recursion Software, Inc., a global provider of software development solutions has enhanced its already extensive C++ ToolKit™ libraries with higher math capability and 64-bit support.

High-level functionality includes:

- Vectors, matrices, and n-dimensional arrays templated on data type
- Basic Linear Algebra
- Random number generator classes
- Classes and functions for statistics, including least squares fits, correlations, etc
- Fast Fourier Transform server classes
- LU factorization classes

“In the last year, Recursion Software has expanded the C++ ToolKits to VxWorks, Mac OS X, Windows XP using Microsoft’s Visual C++ .NET and the Pocket PC using eMbedded Visual C++ 3.0. This toolkit has withstood the test of time for stability and usability. Now it continues to increase in robustness and versatility by incorporating functionality for scientific computing,” said Paul Lipari, President and CEO of Recursion.

[What does 64 bit support do and why is it so hot?]

Summary paragraph

The technical team can be contacted for an in-depth discussion of the features available in C++ ToolKits by email at [via our website](#), or by phone at 800.727.8674.
