FOR IMMEDIATE RELEASE

### **RECURSION SOFTWARE'S LIBRARIES LISTED ON PROGRAMMER'S PARADISE**

*Comprehensive software libraries now available directly from website*

DALLAS, TX (Oct 12, 2004) - Recursion Software, Inc., a global provider of software development solutions, announced today that it has listed its C++ Toolkits, Java™ Generic Libraries (JGL), and the C# Libraries on Programmer's Paradise, Inc. (NASDAQ: PROG), an international marketer of software and services for software development professionals.

The C++ Toolkit is a comprehensive set of portable, ANSI standards-based, class libraries supporting the development of multithreaded distributed applications. It ports to any platform and runs on multiple operating systems with zero-to-minimal code changes. Since it handles many of the intricacies of the C++ language, engineers are freed to focus on other development problems.

JGL is an award-winning library that increases software engineers' productivity by providing a more flexible way to work with the JDK collections. The JGL toolkit provides an advanced, comprehensive collections library for the Java Platform, including collections, algorithms, iterators, and predicates.

Similarly, the C# Toolkit provides an advanced, comprehensive collections library for the .NET platform, which includes collections, iterators, algorithms, function objects, and predicates, all of which supplements the basic functionality provided by the .NET Framework. C# Toolkit is widely applicable across industries and businesses and can be used for any type of application in any field. Decreased lines of code and maintenance mean increased productivity for the software developer and a speedier time to market.

Programmer's Paradise, Inc. is a publicly traded Internet company that markets software products and services to software engineers worldwide via its website, [www.programmersparadise.com](http://www.programmersparadise.com). Programmer's Paradise provides a reputable single-source for software developers to find quality development tools.

#### About Recursion Software, Inc.

Founded in 2001, Recursion Software, Inc. provides software engineers with powerful enterprise development solutions for constructing distributed systems using proven Java™-based methods and emerging Web Services technologies. Recursion Software products allow Java, C# and C++ developers to be productive quickly, by leveraging its expertise in object-oriented techniques and incorporating industry standards. Recursion Software's customer base includes Defense, Financial, Computer Technology, and Telecommunications industries, among others. Recursion Software is headquartered in Frisco, Texas.
