SCADA Systems, PLCs, Network Management Systems

SCADA-Aware Mobile can be used in these and other industries

- Oil and gas
- Building management
- Water/waste water management
- Manufacturing
- Fire detection control systems
- Power stations
- Healthcare
- Transportation

SCADA-Aware Mobile **Standard**

- Runs on Android, iPhone and Windows PC
- All interaction with alarms on a single mobile device
- Supports one SCADA system, PLC or network management system
- Each user can log in using two devices simultaneously
- Current, historical, and related data on the alarm delivered to the client device. Data is continuously updated
- Query of real-time data on alarm tag from mobile device (one time query); could be updated any time
- Delivery awareness – alarm raised when a client device supposed to receive alarms cannot
- Automated, intelligent alarm escalations
- Alarm recipient groups can be defined for tags and tag groups, and for each escalation level
- One button acknowledgment with immediate group visibility
- Alarm specific delay definitions. Alarm not sent if a tag drops out of alarm state during the delay
- Support for transparent switching among 2G, 3G, and 4G, between carrier technology and WiFi, and between wired LAN and WiFi
- Highly secure. All connections are encrypted (SSL/TLS)
- GUI-based administration and maintenance. Easy-to-use Database Editor
- End-to-end reporting. Default and customized reports that could be downloaded into Excel

SCADA-Aware Mobile **Premium**

- All features of Standard Edition, listed above
- **Unlimited** number of tags
- **Unlimited** number of users
- Runs on iPhone, Android and Windows PC
- GPS-based alarm delivery
- Query of multiple previous values of an alarm tag, in addition to one time query
